Education

Rutgers University

M.S. in Statistics- Data Science, GPA: 3.6

Jan 2024 – May 2026

New Brunswick, NJ

Rutgers University

B.A.Sc. in Biomathematics

Jan 2020 – May 2024

New Brunswick, NJ

Experience

Bioinformatics Data Scientist- Bristol Meyers Squibb Challenge

New Brunswick, NJ

- Designed an interactive Streamlit-based computation tool to estimate charge variants in therapeutic proteins, integrating pI calculation and PTM site modeling to assess formulation stability.
- Optimized a Python workflow for automated charge estimation, visualization, and reporting to enhance biopharmaceutical quality analysis and formulation design.

Data Science Intern - IDX Exchange

New York, NY

- Trained predictive models and clustering AVM for home values with geo features, cutting RMSE 18% and reaching MAPE 7.9% on 5-fold CV (R^2 0.71 $\rightarrow$ 0.85).
- Built Tableau market dashboards (price/sqft, DOM, absorption) across 42 counties; enhancing business strategies, reducing ad-hoc reporting time 60%.

R/ Shiny Developer - Rutgers University

New Brunswick, NJ

- Building a Shiny-based interactive app to simulate clinical trials, visualize hypothesis graphs, and redistribute weights dynamically.
- Collaborating with faculty to enhance reproducibility and usability of the open-source trialsimulator package.

Imaging Data Analyst - Children Hospital of Philadelphia

Philadelphia, PA

- nnU-Net v2 brain-tumor segmentation**
 - Shipped predictive-entropy QA overlays on FLAIR/T1 to prioritize low-confidence regions; reduced manual review time by 40% for case triage.
 - Architected cluster inference with $5\times$ GPU job arrays and 20 MC-Dropout passes/case; processed 266 pediatric studies 100 GB with automatic retries and artifact logging, improving throughput predictability for reviewers.
- AutoSurv (radiomics + clinical) — outcomes & explainability**
 - Assembled multimodal ETL to join radiomics features (1.2k/patient) with clinical tables; wrote partitioned datasets with schema/type checks and run manifests to support analysis-ready queries and experiment tracking.
 - Implemented KL-PMVAE + LFSurv; delivered DeepSHAP reports/model cards consumed in research readouts, achieving 10% higher concordance vs. Cox baselines on internal splits.

Quantitative Research Mentee - JPMorgan Chase & Co.

New York, NY

- Engineered market-data ETL in Python (`yfinance`) to date-partitioned Parquet with schema/type checks and daily ingestions; ran 1M+ Monte Carlo stress paths, reducing VaR error by 8%.
- Built forecasting and econometric modeling: LSTM improved equity prediction accuracy 12%; vectorized Black-Scholes pricer increased throughput 15%.

Projects

Twitter Search Application —MySQL, MongoDB, Tableau

github.com/valle1306/Twitter-Search-App

- Built a search system for 2,000 users and 120k posts; added composite/full-text indexes that cut full scans 68% $\rightarrow$ 9%.
- Introduced caching and query tuning; reduced latency by 52%, sustained 90 QPS (peak 260), cache hit rate 89%. Visualized latency/usage in Tableau.

Extracurricular Activities

- Orientation Leader at Rutgers University, fostering leadership and communication through guiding over 2000 students.
- Active Member of Data Science and Quantitative Finance Clubs, participating in data-driven & financial projects.

Relevant Courses

Courses Machine Learning, Data Wrangling, Database Management, Regression and Time Series, Probability and Inferences, Deep Learning, Statistical Modeling, Risk Practice, Advanced Statistical methods in Finance, Data Structures, Math Theory of Probability, Math Theory of Statistics, Linear Algebra, Applied Multivariate, Bayesian Data Analysis

Technical Skills

Programming Languages: SQL, Python, R, JavaScript, SAS, MATLAB

Databases and Packages: Pandas, PySpark, MySQL, Matplotlib, Numpy, Seaborn, ScikitLearn, PyTorch, Tensorflow, Redshift, Hadoop, Spark, Hive, Apache Pig, Snowflake, BigQuery

Tools: Git, Jupyter Notebook, Microsoft Excel, PowerBI, Azure, CI/CD
